

1       **DISK DRIVE COVER FOR USE WITH A DISK DRIVE TO PROVIDE FOR**  
2                   **DISK SHROUDING AND HEAT DISSIPATION**

3                   **ABSTRACT**

4       Disclosed is a disk drive cover that provides improved disk shrouding and heat  
5       dissipation. Part of the cover is recessed relative to the rest and may be substantially  
6       circular. The recessed portion may be located approximately adjacent to at least one disk  
7       and may be substantially coextensive with at least one disk. Further, the internal side of  
8       the recessed portion may be at a vertical depth sufficient enough to shroud at least one  
9       disk. Additionally, the recessed portion may further include at least a member that  
10      projects from the external side of the recessed portion, such as approximately arcuate-  
11      shaped members or approximately rectangular-shaped members, to aid in heat  
12      dissipation.
